

Cloud Center of Excellence

INSIGHTS CHANGER

Cloud adoption is more about people than about technology - A common mistake is running cloud as traditional IT.

A Cloud Center of Excellence is becoming a common approach in enterprise cloud adoption programs to build cloud-specific best practices that ensure governance while maintaining agility!

STEFAN VERMASSEN

Stefaan Vermassen has a broad experience delivering and implementing complex cloud projects in large international organizations across several countries. He focuses on the adoption of cloud and cloud native patterns and has been involved in several Cloud Center of Excellence implementations for large financial institutions.

EXECUTIVE SUMMARY – Cloud computing is rapidly established as the new normal for enterprise IT, driving digital transformation. A Cloud Center of Excellence is becoming a common approach in enterprise cloud adoption programs to build cloud-specific best practices that ensure governance while maintaining agility.

DESCRIPTION - This training will focus on the mission of the Cloud Center of Excellence and how it will help to lead your enterprise from Stone Age to the Cloud Age.

As public cloud providers (Azure, AWS, GCP) keep growing in usage and capabilities, more and more companies move workloads to the cloud.

It is crucial to recognize that embracing cloud is not a shift in data storage location, but a digital transformation of day-to-day IT operations and processes. Often, organizations struggle to create companywide security and service management governance to be able to plan secure, compliant and cost-efficient deployments, without losing focus on agility.

PROGRAMME - We will walk through best practices, processes and culture changes needed to transform an organization from a traditional enterprise to a modern IT enterprise where the IT department is no longer a demand/supply man in the middle, but an enabling partner to drive autonomous DevSecOps teams.

- Different stages in a typical enterprise's cloud journey
- What is a Cloud Center of Excellence and how to successfully build it: goal, structure, mission and best practices?
- Define responsibilities, how to move from traditional IT to an enabling partner to support autonomous implementation teams
- Sharing lessons learned and experiences of building a Cloud Center of Excellence at large financial institutions
